

◆ Section A: Multiple Choice Questions

1. What does AAA stand for in backend security?
 - a) Access, Action, Audit
 - b) Authentication, Authorization, Accountability
 - c) Access, Authorization, Authentication
 - d) Authentication, Access, Audit
2. Which encryption algorithm is commonly used for secure data encryption?
 - a) HTML
 - b) CSS
 - c) AES
 - d) HTTP
3. What is the purpose of JWT (JSON Web Token)?
 - a) Styling web pages
 - b) Securing API authentication
 - c) Managing databases
 - d) Hosting websites
4. Which of the following is used to hash passwords in Node.js?
 - a) bcryptjs
 - b) express
 - c) nodemon
 - d) mysql2
5. What is the main purpose of HTTPS?
 - a) Improve design
 - b) Increase website speed
 - c) Encrypt communication between client and server
 - d) Store passwords
6. Which file is commonly used to store environment variables?
 - a) index.js
 - b) package.json
 - c) .env
 - d) server.js
7. Define Authentication.

8. Define Authorization.
9. What is Accountability in backend security?
10. Explain the importance of data encryption in RESTful APIs.
11. What is the difference between RBAC and ABAC?
12. Why is it important to update third-party libraries regularly?
13. What is the purpose of using environment variables in backend applications?
14. Explain the difference between HTTP and HTTPS.
15. What is the role of middleware in implementing security?
16. JWT tokens are stored in plain text in the database.
17. bcryptjs is used for password hashing.
18. Authorization happens before authentication.
19. Environment variables help protect sensitive information.
20. SSL and TLS are used to secure web communications.
21. You are developing a login system. Describe the steps to securely authenticate a user.
22. A company API is publicly accessible without authentication. What security risks may occur?
23. How would you implement role-based access control (RBAC) in a Node.js application?
24. Explain how you would secure environment variables in a production server.
25. Describe how logging supports accountability in backend applications.
